Preface

ix

Chapter 1 Introduction to the Climate System

1.1 Atmosphere, Ocean, and Land Surface	1
1.2 Atmospheric Temperature	2
1.3 Atmospheric Composition	8
1.4 Hydrostatic Balance	9
1.5 Atmospheric Humidity	11
1.6 The World Ocean	12
1.7 The Cryosphere	14
1.8 The Land Surface	15
Exercises	17

Chapter 2 The Global Energy Balance

2.1 Warmth and Energy	18
2.2 The Solar System	18
2.3 Energy Balance of Earth	21
2.4 Emission Temperature of a Planet	24
2.5 Greenhouse Effect	26
2.6 Global Radiative Flux Energy Balance	27
2.7 Distribution of Insolation	28
2.8 The Energy Balance at the Top of the Atmosphere	32
2.9 Poleward Energy Flux	34
Exercises	39

Chapter 3 Atmospheric Radiative Transfer and Climate

3.1 Photons and Minority Constituents	40
3.2 The Nature of Electromagnetic Radiation	41
3.3 Description of Radiative Energy	41
3.4 Planck's Law of Blackbody Emission	43
3.5 Selective Absorption and Emission by Atmospheric Gases	44
3.6 The Lambert–Bouguet–Beer Law: Formulation of Flux Absorption	52
3.7 Infrared Radiative Transfer Equation: Absorption and Emission	55

3.8	Heuristic Model of Radiative Equilibrium	61
3.9	Clouds and Radiation	63
3.10	Radiative–Convective Equilibrium Temperature Profiles	66
3.11	A Simple Model for the Net Radiative Effect of Cloudiness	72
3.12	Observed Role of Clouds in the Energy Balance of Earth	75
	Exercises	79

Chapter 4 The Energy Balance of the Surface

4.1	Contact Point	81
4.2	The Surface Energy Budget	81
4.3	Storage of Heat in the Surface	83
4.4	Radiative Heating of the Surface	87
4.5	The Atmospheric Boundary Layer	92
4.6	Sensible and Latent Heat Fluxes in the Boundary Layer	99
4.7	Variation of Energy Balance Components with Latitude	103
4.8	Diurnal Variation of the Surface Energy Balance	106
4.9	Seasonal Variation of the Energy Balance of Land Areas	109
4.10	Surface Energy Flux Components over the Oceans	111
	Exercises	114

Chapter 5 The Hydrologic Cycle

5.1	Water, Essential to Climate and Life	115
5.2	The Water Balance	117
5.3	Surface Water Storage and Runoff	120
5.4	Precipitation and Dewfall	121
5.5	Evaporation and Transpiration	122
5.6	Modeling the Land Surface Water Balance	127
5.7	Annual Variation of the Terrestrial Water Balance	130
	Exercises	134

Chapter 6 Atmospheric General Circulation and Climate

6.1	The Great Communicator	136
6.2	Energy Balance of the Atmosphere	136
6.3	Atmospheric Motions and the Meridional Transport of Energy	138
6.4	The Angular-Momentum Balance	150
6.5	Large-Scale Circulation Patterns and Climate	155
	Exercises	169

Chapter 7 The Ocean General Circulation and Climate

7.1	Cauldron of Climate	171
7.2	Properties of Seawater	172
7.3	The Mixed Layer	176
7.4	The Wind-Driven Circulation	180

7.5 Theories for Wind-Driven Circulations	188
7.6 The Deep Thermohaline Circulation	193
7.7 Transport of Energy in the Ocean	197
7.8 Mechanisms of Transport in the Ocean	199
Exercises	202

Chapter 8 History and Evolution of Earth's Climate

8.1 Past Is Prologue	204
8.2 The Instrumental Record	205
8.3 The Historical Record	207
8.4 Natural Recording Systems: The Paleoclimatic Record	207
8.5 A Brief Survey of Earth's Climate History	211
8.6 Uses of Paleoclimatic Data	225
Exercises	227

Chapter 9 Climate Sensitivity and Feedback Mechanisms

9.1 Fools' Experiments	229
9.2 Objective Measures of Climate Sensitivity and Feedback	230
9.3 Basic Radiative Feedback Processes	231
9.4 Ice Albedo Feedback	234
9.5 Dynamical Feedbacks and Meridional Energy Transport	243
9.6 Longwave and Evaporation Feedbacks in the Surface Energy Balance	245
9.7 Cloud Feedback	249
9.8 Biogeochemical Feedbacks	249
Exercises	253

Chapter 10 Global Climate Models

10.1 Mathematical Modeling	254
10.2 Historical Development of Climate Models	254
10.3 The Atmospheric Component	257
10.4 The Land Component	264
10.5 The Ocean Component	265
10.6 Validation of Climate Model Simulations	270
10.7 Sensitivity Estimates from Climate Models with Mixed-Layer Oceans	277
10.8 Coupled Atmosphere–Ocean Processes and the Thermohaline Circulation	280
Exercises	284

Chapter 11 Natural Climate Change

11.1 Natural Forcing of Climate Change	286
11.2 Solar Luminosity Variations	286
11.3 Natural Aerosols and Climate	291
11.4 Volcanic Eruptions and Stratospheric Aerosols	294
11.5 The Orbital Parameter Theory of Ice Ages	300

11.6 Modeling of Ice Age Climates	312
Exercises	317

Chapter 12 Anthropogenic Climate Change

12.1 The Wings of Daedalus	319
12.2 Humans and the Greenhouse Effect	319
12.3 Anthropogenic Aerosols and Atmospheric Sulfur	327
12.4 Changing Surface Conditions	330
12.5 Equilibrium Climate Changes	330
12.6 Time-Dependent Climate Changes	337
12.7 Comparison with Observed Temperature Trends	340
12.8 Sea Level Changes	342
12.9 Outlook for the Future	344
Exercises	344
<i>Appendix A: Calculation of Insolation under Current Conditions</i>	347
<i>Appendix B: The Clausius–Clapeyron Relation</i>	350
<i>Appendix C: The First Law of Thermodynamics, Lapse Rate and Potential Temperature</i>	352
<i>Appendix D: Derivation of Simple Radiative Flux Equations</i>	356
<i>Appendix E: Symbol Definitions</i>	360
<i>Appendix F: Système Internationale (SI) Units</i>	369
<i>Appendix G: Useful Numerical Values</i>	373
<i>Appendix H: Answers to Selected Exercises</i>	375
<i>Glossary</i>	377
<i>References</i>	387
<i>Index</i>	399
<i>International Geophysics Series</i>	409
