Climatic change

EDITED BY
JOHN GRIBBIN

*Visiting Fellow, Science Policy Research Unit,
University of Sussex*

CAMBRIDGE UNIVERSITY PRESS
CAMBRIDGE
LONDON • NEW YORK • MELBOURNE

Contents

<i>List of contributors</i>	vii
<i>Preface</i>	viii
SECTION 1 Studying the climates of the past	1
1 The geological–geophysical framework of ice ages D. H. TARLING	3
2 Palaeobotany and climatic change T. A. WIJMSTRA	25
3 Isotope studies JEAN-CLAUDE DUPLESSY	46
4 Climatic change in historical times JOHN GRIBBIN & H. H. LAMB	68
SECTION 2 Balancing the global heat budget	83
5 The heat balance of the Earth M. I. BUDYKO	85
6 Recent changes in snow and ice G. J. KUKLA	114
SECTION 3 Astronomical influences	131
JOHN GRIBBIN	
7 Long-term effects	133
8 The search for cycles	139
9 Short-term effects	150
SECTION 4 Modelling the changing climate	155
10 The role of the oceans in the global climate system TIM P. BARNETT	157
11 The use of numerical models in studying climatic change JILL WILLIAMS	178
12 The limitations of modelling: the question of statistical significance ROBERT M. CHERVIN	191

Contents

SECTION 5	Climate and Man	203
13	Global influences of mankind on the climate WILLIAM W. KELLOGG	205
14	Climatic changes and human affairs STEPHEN H. SCHNEIDER & RICHARD L. TEMKIN	228
APPENDIX		
	Introduction JOHN GRIBBIN	247
	Background of a geophysical model of the initiation of the next glaciation HERMANN FLOHN	249
	<i>Author index</i>	267
	<i>Subject index</i>	273
