

The background of the cover is a photograph of a desert landscape. In the foreground, there is a large, flat, circular rock formation with a smaller, rounded rock on top. The ground is sandy and dotted with small dark rocks. In the distance, a small, rounded rock formation is visible against a hazy, orange-tinted sky.

Preface	page ix
List of tables	xvi
1 <i>Paleoclimatic reconstruction</i>	1
1.1 Introduction	1
1.2 Sources of paleoclimatic information	3
1.3 Levels of paleoclimatic analysis	9
2 <i>Climate and climatic variation</i>	11
2.1 The nature of climate and climatic variation	11
2.2 The climate system	15
2.3 Feedback mechanisms	22
2.4 Energy balance of the Earth and its atmosphere	24
2.5 Timescales of climatic variation	34
2.6 Variations in the Earth's orbital parameters	38
3 <i>Dating methods I</i>	47
3.1 Introduction and overview	47
3.2 Radio-isotopic methods	48
3.2.1 Radiocarbon dating	50
3.2.2 Potassium-argon dating ($^{40}\text{K}/^{40}\text{Ar}$)	69
3.2.3 Uranium-series dating	72
3.2.4 Thermoluminescence dating: principles and applications	78
3.2.5 Fission-track dating	83
4 <i>Dating methods II</i>	86
4.1 Paleomagnetism	86
4.1.1 The Earth's magnetic field	86
4.1.2 Magnetization of rocks and sediments	87
4.1.3 The paleomagnetic timescale	89
4.1.4 Geomagnetic excursions	92
4.1.5 Secular variations of the Earth's magnetic field	93
4.1.6 Magnetic reversals and faunal extinctions	94
4.1.7 Paleomagnetism and paleoclimate	96

4.2	Chemical dating methods	page 98
4.2.1	Amino-acid dating	99
4.2.2	Obsidian hydration dating	108
4.2.3	Tephrochronology	110
4.3	Biological dating methods	112
4.3.1	Lichenometry	112
4.3.2	Dendrochronology	119
5	<i>Ice cores</i>	120
5.1	Introduction	120
5.2	Stable isotope analysis	124
5.2.1	Stable isotopes in water: measurement and standardization	127
5.2.2	Oxygen-18 concentration in atmospheric precipitation	127
5.2.3	Geographical factors affecting stable isotope concentrations	128
5.3	Dating ice cores	134
5.3.1	Radio-isotopic methods	136
5.3.2	Seasonal variations	136
5.3.3	Reference horizons	142
5.3.4	Theoretical models	147
5.3.5	Stratigraphic correlations	152
5.4	Long-term $\delta^{18}\text{O}$ records of polar ice cores	153
5.4.1	The Holocene $\delta^{18}\text{O}$ record	156
5.4.2	The $\delta^{18}\text{O}$ record of the last 1156 years	156
5.5	Physical and chemical characteristics of ice cores	160
5.5.1	Physical features	160
5.5.2	Gas content of ice cores	162
5.5.3	Long-term changes in particulate matter in ice cores	165
5.5.4	Long-term changes in nitrate ions in ice cores	169
6	<i>Marine sediments</i>	171
6.1	Introduction	171
6.2	Paleoclimatic information from biological material in ocean cores	172
6.3	Oxygen isotope studies of calcareous marine fauna	178
6.3.1	Isotopic composition of the oceans	178
6.3.2	Oxygen isotope stratigraphy	184

6.4	Relative abundance studies	<i>page</i> 189
6.4.1	North Atlantic Ocean	198
6.4.2	Pacific Ocean	201
6.4.3	Indian Ocean	203
6.5	Morphological variations	204
6.5.1	Coiling direction variations	205
6.5.2	Size variations	205
6.5.3	Shape variations	207
6.5.4	Surface structure variations	207
6.6	Dissolution of deep-sea carbonates	208
6.7	Paleoclimatic information from inorganic material in ocean cores	213
6.8	Causes of glaciation and deglaciation: the oceanic evidence	217
6.9	Mechanisms of glaciation and deglaciation: the oceanic evidence	220
7	<i>Non-marine geological evidence</i>	224
7.1	Introduction	224
7.2	Periglacial features	224
7.3	Snowlines and glaciation thresholds	230
7.3.1	The climatic and paleoclimatic interpretation of snowlines	232
7.3.2	The age of former snowlines	236
7.4	Mountain glacier fluctuations	236
7.4.1	Evidence of glacier fluctuations	238
7.4.2	The record of glacier front positions	239
7.5	Lake-level fluctuations	241
7.5.1	Hydrological balance models	243
7.5.2	Hydrological – energy balance models	247
7.5.3	Regional patterns of lake-level fluctuations	248
7.6	Speleothems	255
7.6.1	Paleoclimatic information from periods of speleothem growth	257
7.6.2	Dating of speleothems and the significance of depositional intervals	258
7.6.3	Isotopic variations in speleothems	260
7.6.4	Speleothems as indicators of sea-level variations	263
8	<i>Non-marine biological evidence</i>	264
8.1	Introduction	264
8.2	Former vegetation distribution from plant macrofossils	264

8.2.1	Arctic treeline fluctuations	<i>page</i> 264
8.2.2	Alpine treeline fluctuations	267
8.2.3	Lower treeline fluctuations	270
8.3	Modern biological distributions	275
8.3.1	Tropical South America	276
8.3.2	Tropical Africa	281
8.4	Insects	284
8.4.1	Paleoclimatic reconstructions based on fossil Coleoptera	286
9	<i>Pollen analysis</i>	289
9.1	Introduction	289
9.2	Basis of pollen analysis	289
9.2.1	Pollen grain characteristics	292
9.2.2	Pollen productivity and dispersal: the pollen rain	292
9.2.3	Pollen rain as a representation of vegetation composition	294
9.3	Sources of fossil pollen	304
9.4	Preparation of the samples	305
9.5	Pollen analysis of a site: the pollen diagram	306
9.5.1	Zonation of the pollen diagram	311
9.6	Mapping vegetation change: isopolls and isochrones	312
9.7	Paleoclimatic reconstructions based on pollen analysis	317
10	<i>Dendroclimatology</i>	330
10.1	Introduction	330
10.2	Fundamentals of dendroclimatology	331
10.2.1	Sample selection	332
10.2.2	Cross dating	335
10.2.3	Standardization of ring-width data	337
10.2.4	Calibration of ring-width data	341
10.3	Dendroclimatic reconstructions	344
10.3.1	Models derived by stepwise multiple regression (level II)	344
10.3.2	Models derived by principal components analysis and stepwise multiple regression (level III)	346
10.3.3	Models derived by principal components and multiple canonical regression analysis (level IV)	353
10.4	Verification of climatic reconstructions	367

10.5	Densitometric dendroclimatology	page 369
10.6	Isotope dendroclimatology	371
10.6.1	Isotopic studies of subfossil wood	378
11	<i>Historical data</i>	380
11.1	Introduction	380
11.2	Historical records and their interpretation	382
11.3	Historical weather observations	386
11.4	Historical records of weather-dependent natural phenomena	392
11.5	Phenological and biological data	402
12	<i>Quaternary paleoclimatology: current status and future directions</i>	408
12.1	Introduction	408
12.2	Methodological improvements	408
12.3	Paleoclimatic reconstruction: future directions	410
12.3.1	Calibration	411
12.3.2	Dating	412
12.3.3	Geographic coverage	412
	<i>Appendix</i>	414
A.1	Calculation of radiocarbon age and standardization procedure	414
A.2	Fractionation effects	415
	<i>References</i>	417
	<i>Acknowledgements</i>	463
	<i>Index</i>	466
