

*WEATHER CYCLES
REAL OR
IMAGINARY?*

<i>Preface</i>	page xi
<i>Acknowledgements</i>	xiii
1 The search for cycles	1
1.1 Social and economic preamble	2
1.2 History of cycle-searching	5
2 Statistical background	11
2.1 Time series	12
2.2 Sampling	13
2.3 Length of record	16
2.4 Quality of data	16
2.5 Smoothing: running means and filters	18
2.6 Harmonic analysis and power spectra	23
2.7 Red, white and pink noise	29
3 Instrumental records	33
3.1 Central England temperature record	34
3.2 Other temperature series	37
3.3 Rainfall records	38
3.4 Chinese rainfall	42
3.5 US rainfall	43
3.6 Nile floods	45
3.7 Pressure patterns	46
3.8 The Southern Oscillation	48
3.9 Stratospheric winds	51
3.10 Sunspots and the QBO	53
3.11 Shorter term cycles	58

3.12	Summary	59
4	Proxy data	63
4.1	Dendroclimatology	64
4.2	Varves	71
4.3	A cautionary tale	74
4.4	Ice cores	76
4.5	Glaciers	83
4.6	Ice ages and ocean sediments	84
4.7	Economic series	90
4.8	Summary	92
5	The global climate	94
5.1	Circulation patterns	95
5.2	Radiation balance	100
5.3	Prolonged abnormal weather patterns	103
5.4	The El Niño	107
5.5	Modelling the El Niño	113
5.6	Models of shorter term cycles	117
5.7	Summary	119
6	Extraterrestrial influences	120
6.1	Sunspots and solar activity	121
6.2	Tidal forces	134
6.3	Physical links between solar and tidal variations and the weather	139
6.4	Orbital variations	142
7	Autovariance and other explanations	146
7.1	Non-linearity	147
7.2	Natural atmospheric variability	149
7.3	Climatic feedback mechanisms	152
7.4	Extraterrestrial explanations	155
7.5	Modelling the ice ages	157
8	Nothing more than chaos?	162
8.1	Chaos Theory	162
8.2	Future changes	169
	<i>Appendix A</i> Mathematical background	171
A.1	Measures of variability	171
A.2	Sherman's statistic	172
A.3	Fourier series and Fourier analysis	175
A.4	Calculation of the coefficients of harmonic analyses	176
A.5	Maximum entropy spectral analysis (MESA)	177
A.6	Smoothing and filtering	179
A.7	Noise	184
