# CONTENTS

**PREFACE** xiii

**ACKNOWLEDGMENTS** xv

## **I Paleoclimatic Reconstruction**

- 1.1 Introduction 1
- 1.2 Sources of Paleoclimatic Information 4
- 1.3 Levels of Paleoclimatic Analysis 8
- 1.4 Modeling in Paleoclimatic Research 9

## **2 Climate and Climatic Variation**

- 2.1 The Nature of Climate and Climatic Variation 11
- 2.2 The Climate System 15
- 2.3 Feedback Mechanisms 22
- 2.4 Energy Balance of the Earth and its Atmosphere 24
- 2.5 Timescales of Climatic Variation 32
- 2.6 Variations of the Earth's Orbital Parameters 35

## 3 Dating Methods I

- 3.1 Introduction and Overview 47
- 3.2 Radioisotopic Methods 48
  - 3.2.1 Radiocarbon Dating 50
    - 3.2.1.1 Principles of  $^{14}\text{C}$  dating 51
    - 3.2.1.2 Measurement Procedures, Materials, and Problems 53
    - 3.2.1.3 Accuracy of Radiocarbon Dates 54
    - 3.2.1.4 Sources of Error in  $^{14}\text{C}$  Dating 54
    - 3.2.1.5 Long-term Changes in Atmospheric  $^{14}\text{C}$  Content 62
    - 3.2.1.6 Causes of Temporal Radiocarbon Variations 68
    - 3.2.1.7 Radiocarbon Variations and Climate 71
  - 3.2.2 Potassium-argon Dating ( $^{40}\text{K}/^{40}\text{Ar}$ ) 73
    - 3.2.2.1 Problems of  $^{40}\text{K}/^{40}\text{Ar}$  Dating 74
    - 3.2.2.2  $^{40}\text{Ar}/^{39}\text{Ar}$  Dating 74
  - 3.2.3 Uranium-series Dating 76
    - 3.2.3.2 Problems of U-series Dating 80
  - 3.2.4 Luminescence Dating: Principles and Applications 80
    - 3.2.4.1 Thermoluminescence (TL) Dating 84
    - 3.2.4.2 Problems of Thermoluminescence Dating 85
    - 3.2.4.3 Optical and Infrared Stimulated Luminescence (OSL and IRSL) Dating 86
  - 3.2.5 Fission-track Dating 89

## 4 Dating Methods II

- 4.1 Paleomagnetism 91
  - 4.1.1 The Earth's Magnetic Field 92
  - 4.1.2 Magnetization of Rocks and Sediments 93
  - 4.1.3 The Paleomagnetic Timescale 95
  - 4.1.4 Geomagnetic Excursions 96
  - 4.1.5 Secular Variations of the Earth's Magnetic Field 97
- 4.2 Dating Methods Involving Chemical Changes 99
  - 4.2.1 Amino-acid Dating 100
    - 4.2.1.1 Principles of Amino-acid Dating 100
    - 4.2.1.2 Numerical Age Estimates Based on Amino-acid Ratios 106
    - 4.2.1.3 Relative Age Estimates Based on Amino-acid Ratios 109
    - 4.2.1.4 Paleotemperature Estimates from Amino-acid Racemization and Epimerization 110
  - 4.2.2 Obsidian Hydration Dating 112
  - 4.2.3 Tephrochronology 113
- 4.3 Biological Dating Methods 116
  - 4.3.1 Lichenometry 116
    - 4.3.1.1 Principles of Lichenometry 116
    - 4.3.1.2 Problems of Lichenometry 117
  - 4.3.2 Dendrochronology 123

## 5 Ice Cores

- 5.1 Introduction 125
- 5.2 Stable Isotope Analysis 126
  - 5.2.1 *Stable Isotopes in Water: Measurement and Standardization* 130
  - 5.2.2 *Oxygen-18 Concentration in Atmospheric Precipitation* 132
  - 5.2.3 *Geographical Factors Affecting Stable Isotope Concentrations* 132
  - 5.2.4 *Calibrating  $\delta^{18}\text{O}$  for Paleotemperature Reconstructions* 135
  - 5.2.5 *Deuterium Excess* 139
- 5.3 Dating Ice Cores 142
  - 5.3.1 *Radioisotopic Methods* 142
  - 5.3.2 *Seasonal Variations* 143
  - 5.3.3 *Reference Horizons* 147
  - 5.3.4 *Theoretical Models* 151
  - 5.3.5 *Stratigraphic Correlations* 153
- 5.4 Paleoclimatic Reconstruction from Ice Cores 153
  - 5.4.1 *Ice-core Records from Antarctica* 154
  - 5.4.2 *Ice-core Records from Greenland* 158
  - 5.4.3 *Past Atmospheric Composition from Polar Ice Cores* 166
  - 5.4.4 *Volcanic Eruptions Recorded in Ice Cores* 177
  - 5.4.5 *Correlation of Ice-core Records from Greenland and Antarctica* 181
  - 5.4.6 *Correlation Between Ice Cores and Marine Sediments* 184
  - 5.4.7 *Ice-core Records from Low Latitudes* 186

## 6 Marine Sediments and Corals

- 6.1 Introduction 191
- 6.2 Paleoclimatic Information from Biological Material in Ocean Cores 193
- 6.3 Oxygen Isotope Studies of Calcareous Marine Fauna 198
  - 6.3.1 *Oxygen Isotopic Composition of the Oceans* 199
  - 6.3.2 *Oxygen Isotope Stratigraphy* 206
  - 6.3.3 *Orbital Tuning* 210
  - 6.3.4 *Sea-level Changes and  $\delta^{18}\text{O}$*  215
- 6.4 Relative Abundance Studies 216
  - 6.4.1 *North Atlantic Ocean* 226
  - 6.4.2 *Pacific Ocean* 228
  - 6.4.3 *Indian Ocean* 232
- 6.5 Paleotemperature Records from Alkenones 233
- 6.6 Dissolution of Deep-sea Carbonates 236
- 6.7 Paleoclimatic Information from Inorganic Material in Ocean Cores 242
- 6.8 Coral Records of Past Climate 247
  - 6.8.1 *Paleoclimate from Coral Growth Rates* 249
  - 6.8.2  *$\delta^{18}\text{O}$  in Corals* 250
  - 6.8.3  *$\delta^{13}\text{C}$  in Corals* 253
  - 6.8.4  *$\Delta^{14}\text{C}$  in Corals* 253
  - 6.8.5 *Trace Elements in Corals* 253

- 6.9 Thermohaline Circulation of the Oceans 254
- 6.10 Ocean Circulation Changes and Climate over the Last Glacial-Interglacial Cycle 260
  - 6.10.1 *Heinrich Events* 261
  - 6.10.2 *Environmental Changes at the End of the Last Glaciation* 268
- 6.11 Changes in Atmospheric Carbon Dioxide: the Role of the Oceans 276
- 6.12 Orbital Forcing: Evidence from the Marine Record 280

## 7 Non-marine Geological Evidence

- 7.1 Introduction 285
- 7.2 Loess 286
  - 7.2.1 *Chronology of Loess-paleosol Sequences* 287
  - 7.2.2 *Paleoclimatic Significance of Loess Paleosol Sequences* 290
- 7.3 Periglacial Features 293
- 7.4 Snowlines and Glaciation Thresholds 297
  - 7.4.1 *The Climatic and Paleoclimatic Interpretation of Snowlines* 300
  - 7.4.2 *The Age of Former Snowlines* 302
- 7.5 Mountain Glacier Fluctuations 304
  - 7.5.1 *Evidence of Glacier Fluctuations* xx
  - 7.5.2 *The Record of Glacier Front Positions* xx
- 7.6 Lake-level Fluctuations xx
  - 7.6.1 *Hydrological Balance Models* xx
  - 7.6.2 *Hydrological-energy Balance Models* xx
  - 7.6.3 *Regional Patterns of Lake-level Fluctuations* xx
- 7.7 Lake Sediments 324
- 7.8 Speleothems 326
  - 7.8.1 *Paleoclimatic Information from Periods of Speleothem Growth* 327
  - 7.8.2 *Dating of Speleothems and the Significance of Depositional Intervals* 327
  - 7.8.3 *Isotopic Variations in Speleothems* 329
  - 7.8.4 *Speleothems as Indicators of Sea-level Variations* 334

## 8 Non-marine Biological Evidence

- 8.1 Introduction 337
- 8.2 Former Vegetation Distribution from Plant Macrofossils 337
  - 8.2.1 *Arctic Treeline Fluctuations* 338
  - 8.2.2 *Alpine Treeline Fluctuations* 341
  - 8.2.3 *Lower Treeline Fluctuations* 344
- 8.3 Insects 348
  - 8.3.1 *Paleoclimatic Reconstructions Based on Fossil Coleoptera* 350
  - 8.3.2 *Paleoclimatic Reconstruction Based on Aquatic Insects* 354

## 9 Pollen Analysis

- 9.1 Introduction 357
- 9.2 The Basis of Pollen Analysis 358
  - 9.2.1 *Pollen Grain Characteristics* 358
  - 9.2.2 *Pollen Productivity and Dispersal: the Pollen Rain* 359
  - 9.2.3 *Sources of Fossil Pollen* 362
  - 9.2.4 *Preparation of the Samples* 363
  - 9.2.5 *Pollen Rain as a Representation of Vegetation Composition and Climate* 363
  - 9.2.6 *Maps of Modern Pollen Data* 365
- 9.3 How Rapidly Does Vegetation Respond to Changes in Climate? 365
- 9.4 Pollen Analysis of a Site: the Pollen Diagram 370
  - 9.4.1 *Zonation of the Pollen Diagram* 372
- 9.5 Mapping Vegetation Change: Isopolls and Isochrones 373
- 9.6 Quantitative Paleoclimatic Reconstructions Based on Pollen Analysis 375
- 9.7 Paleoclimatic Reconstruction from Long Quaternary Pollen Records 384
  - 9.7.1 *Europe* 384
  - 9.7.2 *Sabana de Bogotá, Colombia* 387
  - 9.7.3 *Amazonia* 389
  - 9.7.4 *Equatorial Africa* 391
  - 9.7.5 *Florida* 395

## 10 Dendroclimatology

- 10.1 Introduction 397
- 10.2 Fundamentals of Dendroclimatology 398
  - 10.2.1 *Sample Selection* 400
  - 10.2.2 *Cross-dating* 403
  - 10.2.3 *Standardization of Ring-width Data* 406
  - 10.2.4 *Calibration of Tree-ring Data* 412
  - 10.2.5 *Verification of Climatic Reconstructions* 421
- 10.3 Dendroclimatic Reconstructions 423
  - 10.3.1 *Temperature Reconstruction from Trees at the Northern Treeline* 423
  - 10.3.2 *Drought Reconstruction from Midlatitude Trees* 426
  - 10.3.3 *Paleohydrology from Tree Rings* 432
- 10.4 Isotope Dendroclimatology 434
  - 10.4.1 *Isotopic Studies of Subfossil Wood* 436

## 11 Documentary Data

- 11.1 Introduction 439
- 11.2 Historical Records and Their Interpretation 441
  - 11.2.1 *Historical Weather Observations* 444
  - 11.2.2 *Historical Records of Weather-dependent Natural Phenomena* 448
  - 11.2.3 *Phenological and Biological Records* 454

- 11.3 Regional Studies Based on Historical Records 460
  - 11.3.1 *East Asia* 460
  - 11.3.2 *Europe* 461
- 11.4 Records of Climate Forcing Factors 468

## **12 Paleoclimate Models**

- 12.1 Introduction 471
- 12.2 Types of Models 472
  - 12.2.1 *Energy Balance Models and Statistical Dynamical Models* 473
  - 12.2.2 *Radiative Convective Models* 474
  - 12.2.3 *General Circulation Models* 475
- 12.3 Sensitivity Experiments Using General Circulation Models 480
  - 12.3.1 *Orbital Forcing and the Initiation of Continental Glaciation in the Northern Hemisphere* 481
  - 12.3.2 *Orbital Forcing and Monsoon Climate Variability* 486
  - 12.3.3 *The Influence of Continental Ice Sheets* 490
- 12.4 Model Simulations: 18 ka B.P. to the Present 495
- 12.5 Coupled Ocean-atmosphere Model Experiments 499
- 12.6 General Circulation Model Paleoclimate Simulations and the Paleorecord 505

### **APPENDIX A: FURTHER CONSIDERATIONS ON RADIOCARBON DATING 507**

- A.1 *Calculation of Radiocarbon Age and Standardization Procedure* 507
- A.2 *Fractionation Effects* 508
