*The Origin
and Evolution of
Planetary Atmospheres*

A. Henderson-Sellers

University of Liverpool

Monographs on Astronomical Subjects: 9

Adam Hilger Ltd, Bristol

Contents

Preface	ix
1. The Origin of the Planets and the Evolution of the Sun	1
1.1 Composition of the Planets	2
1.2 Solar Evolution	14
1.3 Format of Study	18
2. Evolution of Atmospheres: The Mechanisms of Long-Term Change	20
2.1 Mechanisms and Rate of Atmospheric Build-up	25
2.1.1 <i>Impact Degassing</i>	28
2.1.2 <i>Surface (slower) Degassing</i>	30
2.1.3 <i>Dynamics</i>	35
2.1.4 <i>Hydrostatic control</i>	39
2.1.5 <i>Magnetic Field Effects</i>	42
2.2 Chemical State and Loss of Gases	45
2.2.1 <i>Thermal Structure</i>	47
2.2.2 <i>Photochemical and Chemical Reactions</i>	57
2.3 Feedback Effects within Evolving Atmospheres	63
2.3.1 <i>Surface Condensation</i>	64
2.3.2 <i>Clouds</i>	66
3. Atmospheric Evolution in the Solar System	72
3.1 Atmospheres of the Major Planets	73
3.1.1 <i>Jupiter and Saturn</i>	75
3.1.2 <i>Uranus and Neptune</i>	85
3.2 A Numerical Model for Atmospheric Evolution	86
	xiii

3.3	Tenuous and Transient Planetary Atmospheres	92
3.3.1	<i>Mercury and the Moon</i>	92
3.3.2	<i>Pluto</i>	95
3.3.3	<i>The Satellites of Jupiter and Saturn</i>	98
3.4	Atmospheres of the Terrestrial Planets	101
3.4.1	<i>Venus, the Earth and Mars</i>	102
3.4.2	<i>Titan</i>	117
3.4.3	<i>Triton</i>	122
4.	The Earth's Atmosphere and the Origin and Evolution of Life	125
4.1	The Pre-biotic Environment	129
4.2	The Evolutionary Environment	133
4.2.1	<i>A CO₂ and H₂O Vapour Atmosphere Containing Other Neutral and Trace Gases</i>	133
4.2.2	<i>An Atmospheric Mass Between 500 and 1000 mbar</i>	134
4.2.3	<i>Lower Incident Solar Flux</i>	137
4.2.4	<i>Extensive Surface Liquid Water</i>	137
4.2.5	<i>Average Surface Temperatures Between 275 K and 315 K</i>	139
4.2.6	<i>A Convectively Active Troposphere</i>	140
4.2.7	<i>Trace Gases both Abundant and Variable</i>	142
4.3	Evolution of the Earth's Climate, Hydrosphere and Biosphere	150
5.	Planetary Climatology: Shorter Timescale Atmospheric Changes	159
5.1	Climatic Forcing Effects on the Planets	160
5.1.1	<i>Solar Radiation at the Top of the Atmosphere</i>	160
5.1.2	<i>Atmospheres</i>	162
5.1.3	<i>Land Surface and Volatiles</i>	164
5.1.4	<i>Planetary Interiors</i>	
5.1.5	<i>Other Geo- and Astrophysical Perturbing Effects</i>	168
5.2	Data and Models of Planetary Climatic Change	171

5.2.1	<i>Climate and the Planetary Albedo</i>	175
5.2.2	<i>Degassing and Planetary Climatic Change</i>	185
5.2.3	<i>Short-term Chemical Changes</i>	193
6.	Stability of Planetary Environments, Exobiology and the Complexity of Evolutionary Processes	195
6.1	Climate Models and Evolutionary Timescales	195
6.2	Life Within and Beyond the Solar System	200
6.3	Epilogue—the Uniqueness of Individual Planetary Systems	204
	Appendix. Planetary Temperature Isopleths: Diagrammatic Results from a Numerical Model	207
	Bibliography	217
	Indexes	229
