Preface xiii
Chapter I: Basics 1
I.1 Wave modelling in historical perspective 3
I.2 The action balance equation and the statistical description of wave evolution 5
I.2.1 Dynamics 7
I.2.2 Linearization and normal modes 12
I.2.3 Slowly varying waves 16
I.2.4 The superposition of linear waves and the initial value problem 21
I.2.5 Statistical description in the linear theory 25
I.2.6 The superposition of random WKB trains 35
I.2.7 The slow evolution of the spectrum due to weak nonlinearity and weak interaction with the environment 39
I.2.8 Quasi-linearity of nonlinear source functions 41
I.2.9 Propagation in an inhomogeneous medium 43
I.2.10 The action balance equation 47
I.3 Sea surface winds and atmospheric circulation 48
I.3.1 General 48
I.3.2 Atmospheric flow 49
I.3.3 Two extreme limits 49
I.3.4 Numerical weather prediction 50
I.3.5 Parametrization of the momentum flux 51
I.3.6 Boundary conditions and the wind profile over waves 53
I.3.7 Density effects and atmospheric stability 57
I.3.8 Consequences for wave modelling 60
I.4 Measurements of waves and winds 60
I.4.1 The role of wind and wave measurements 60
I.4.2 Operational wind measurements 61
I.4.3 Wind measurements for research applications 62
I.4.4 Operational wave measurements 62
I.4.5 Wave measurements for research applications 64
I.4.6 Satellite measurements of winds and waves 65
I.4.7 Altimeter wind measurements 66
I.4.8 Scatterometer wind measurements 68
Chapter II: The physical description of wave evolution 69
II.1 Introduction 71

II.2	Wave growth by wind		71
	II.2.1	Linear theory of wind-wave generation	75
	II.2.2	General properties of the Taylor-Goldstein equation	79
	II.2.3	Numerical solution and comparison with observations	82
	II.2.4	Effects of gustiness on wave growth	88
	II.2.5	Effects of small-scale turbulence	91
	II.2.6	Quasi-linear theory of wind-wave generation	95
	II.2.7	Wave-induced stress and the drag of air flow over sea waves	102
	II.2.8	Summary of conclusions	112
II.3	Wave–wave interaction		113
	II.3.1	An example	113
	II.3.2	General formalism	115
	II.3.3	Application to ocean waves: the amplitude equations	119
	II.3.4	The nonlinear energy transfer: general considerations	122
	II.3.5	The nonlinear energy transfer: the transfer integral	127
	II.3.6	Irreversibility	134
	II.3.7	General conservation properties of nonlinear transfer	136
	II.3.8	Interaction symmetries, principle of detailed balance and wave–particle analogy	138
	II.3.9	Nonequilibrium entropy	141
	II.3.10	The equilibrium energy cascade	142
II.4	Wave dissipation by surface processes		143
	II.4.1	Whitecap model	144
	II.4.2	Quasi-saturated model	145
	II.4.3	Probability model	149
	II.4.4	Summary	153
II.5	Bottom friction and percolation		156
	II.5.1	Introduction	156
	II.5.2	Dissipation over sand bottoms	156
	II.5.3	Basic parameters of the bottom boundary layer	158
	II.5.4	Dissipation as a function of the bottom stress	160
	II.5.5	Parametrization of the bottom stress	162
	II.5.6	Models of bottom friction	164
	II.5.7	Evaluation	165
	II.5.8	Conclusion	166
II.6	Bottom scattering and bottom elasticity		167
II.7	Interactions with ice		171
II.8	Growth curve observations		174
	II.8.1	Theory	174
	II.8.2	Observations	176
	II.8.3	Is there evidence for u_* scaling?	182
	II.8.4	Conclusion	182

II.9 Observations of spectral shape 183
II.10 Observations of the directional response to turning winds 188
II.10.1 Observation and presentation techniques 188
II.10.2 Observation conditions 190
II.10.3 Results of the observations 190
II.10.4 Discussion 193
II.10.5 Conclusion 194
II.11 Observations of wave growth and dissipation in shallow water 195
II.11.1 Growth curves 195
II.11.2 Spectral shape 199
II.11.3 Swell dissipation 200
II.11.4 Concluding remark 201
Chapter III: Numerical modelling of wave evolution 203
III.1 Introduction 205
III.2 The kinematic part of the energy balance equation 207
III.3 Parametrization of source terms and the energy balance in a growing wind sea 215
III.3.1 Wind input and dissipation 216
III.3.2 Nonlinear transfer 223
III.3.3 The energy balance in a growing wind sea 229
III.4 Numerical scheme 233
III.4.1 Implicit integration of the source functions 234
III.4.2 Advective terms and refraction 235
III.4.3 Boundary conditions and grid nesting 238
III.5 The WAM model software package 239
III.5.1 Pre-processing programs 241
III.5.2 Processing programs 241
III.5.3 Post-processing programs 244
III.6 Simple tests 244
Chapter IV: Applications to wave hindcasting and forecasting 259
IV.1 Introduction 261
IV.2 Surface wind fields 268
IV.2.1 The marine wind field 268
IV.2.2 Meteorological models 272
IV.2.3 Extratropical and tropical storms 278
IV.3 Wave sensitivity to the accuracy of the input wind fields 282
IV.3.1 Wave models and input wind 283
IV.3.2 The accuracy of wind field description 285
IV.3.3 Orographic effects 293
IV.3.4 Wind resolution 294
IV.3.5 Wind interpolation 299
IV.4 Operational applications 300
IV.4.1 Analysis 300

IV.4.2 Forecast 307
IV.5 Sensitivity to the evaluation of the wind input to waves 314
IV.5.1 Wave-dependent drag coefficient 316
IV.5.2 Wind variability 320
IV.5.3 Atmospheric stability 331
IV.6 Effects of bottom dissipation 335
IV.6.1 Bottom friction 335
IV.6.2 Bottom elasticity 341
IV.7 Shoaling and depth refraction 343
IV.8 Wave–current interactions 349
IV.8.1 Basic concepts 349
IV.8.2 Large scale tidal flows 350
IV.8.3 Current ring 353
IV.8.4 Application to the open ocean 355
IV.9 Sensitivity to discretization in the wave model 360
IV.9.1 Spatial resolution 360
IV.9.2 Grid nesting 364
IV.9.3 Spectral resolution 368
IV.10 Waves as part of the coupled atmosphere ocean system 371
IV.10.1 Combining waves and storm surge modelling 371
IV.10.2 Effect of waves on the atmospheric general circulation 374
Chapter V: Global satellite wave measurements 379
V.1 Impact of satellite wave measurements on wave modelling 381
V.2 Radar altimeter measurements of wave height 382
V.3 The Synthetic Aperture Radar (SAR) 384
V.4 Extraction of wave spectra from SAR image spectra 391
V.4.1 The forward mapping relation 391
V.4.2 Inversion of the nonlinear mapping relation 393
V.4.3 Results 394
Chapter VI: Wave data assimilation and inverse modelling 403
VI.1 General features of wave data assimilation and inverse modelling 405
VI.1.1 Background 405
VI.1.2 An integrated data assimilation scheme 406
VI.1.3 Specific features of wave data assimilation 408
VI.2 The general minimization problem 410
VI.2.1 Basic assumptions and notation 410
VI.2.2 Cost functions 413
VI.2.3 Maximum likelihood derivation of the error matrices 415
VI.2.4 Cost function classification of methods 417
VI.3 The adjoint model technique 421
VI.3.1 General principle 421
VI.3.2 Implementation 424
VI.4 Applications – Overview 426

VI.5 An optimal interpolation scheme for assimilating altimeter data into the WAM model 429
VI.5.1 Introduction 429
VI.5.2 Wave height analysis 430
VI.5.3 Results 433
VI.5.4 Conclusions 439
VI.6 Optimization of the WAM source functions by direct cost function minimization 442
VI.6.1 The cost function 442
VI.6.2 Source terms in the WAM model 443
VI.6.3 Fetch laws and optimization routine 444
VI.6.4 Results 445
VI.7 Wave model fitting using the adjoint technique 447
VI.8 Application of the adjoint method to an initial value problem 454
VI.8.1 Introduction 454
VI.8.2 The assimilation procedure 454
VI.8.3 Results 457
VI.9 A wind and wave data assimilation scheme based on the adjoint technique 460
VI.9.1 General properties of the adjoint of a wave prediction model 460
VI.9.2 Implementation of the adjoint technique for a second generation wave model 463
VI.9.3 Results of numerical experiments 465
VI.9.4 Conclusions 468
VI.10 Data assimilation using a Green's function approach 468
VI.10.1 Introduction 468
VI.10.2 Green's function formulation 469
VI.10.3 Determination of the impulse response functions 472
VI.10.4 Test cases 475
VI.10.5 Conclusions 479
