The Nature of the Environment

Third Edition

Andrew Goudie

Professor of Geography, University of Oxford

BLACKWELL
Oxford UK & Cambridge USA

Contents

Preface ix
Acknowledgements xi

PART I The Global Framework

- 1 Global Geological Background 3
 - 1.1 The ancient earth 3
 - 1.2 Core, mantle and crust 3
 - 1.3 The nature of the ocean floors 4
 - 1.4 The surface of the land 7
 - 1.5 Earthquakes 7
 - 1.6 The shape of the continents 8

Window 1 The mountains of New Zealand 10

 - 1.7 Wandering continents 12
 - 1.8 The question of plates 12

Window 2 The origin of the Himalayas 18

 - 1.9 Microplates and exotic terranes 21
 - 1.10 The earth's rock types 23
 - 1.11 The subdivisions of the earth's history 25
 - 1.12 Conclusions 26
- 2 Global Climatic Background 27
 - 2.1 A vertical profile through the atmosphere 27
 - 2.2 Global climate 27
 - 2.3 World patterns of precipitation 32
 - 2.4 World patterns of temperature 33
 - 2.5 The major climatic zones 36
 - 2.6 The hydrological cycle 36

Window 3 Water and sediment in world rivers 38

 - 2.7 Ocean currents 39

- 2.8 The world's great soil orders 42
 - 2.9 Climatic geomorphology: the influence of climate, soil and vegetation 46
 - 2.10 Major vegetation types 46
 - 2.11 Floral realms 49
 - 2.12 Faunal realms 50
 - 2.13 Climatic change 51
 - 2.14 Causes of long-term climatic change 57
- Window 4 The Ice Age in Britain* 60
- 2.15 Sea-level changes 63
 - 2.16 Conclusions 64

PART II Major World Zones

- 3 Polar Regions 67
 - 3.1 Polar climates 67
 - 3.2 Vegetation and wildlife 69
 - 3.3 Glacier types 70
 - 3.4 The formation of glacier ice 71
 - 3.5 How glaciers move 71
 - 3.6 Glacial erosion 72

Window 5 Surging glaciers 74

 - 3.7 Glacial deposits 82
 - 3.8 Glacier ice and sea-level change 85
 - 3.9 Permafrost 86
 - 3.10 Ground ice 87
 - 3.11 Thermokarst 88
 - 3.12 Ice segregation and frost heaving 89
 - 3.13 Frost shattering and soil formation 90
 - 3.14 Slope processes, avalanches and river regimes 91
 - 3.15 Environmental problems and hazards for tundra development 93

- 4 The Mid-latitudes 97
- 4.1 The westerlies 97
 - 4.2 Cyclones and anticyclones 98
 - 4.3 Air masses 98
 - 4.4 Cool temperate climates 100
 - 4.5 Western margin warm temperate climates (the Mediterranean type) 102
 - 4.6 Eastern margin warm temperate climates 103
 - 4.7 Boreal forest 104
 - 4.8 Deciduous forests 104
 - 4.9 Mid-latitude grasslands 105
 - 4.10 Mediterranean evergreen woodland 105
 - 4.11 Soils of cool temperate climates 105
 - 4.12 Soils of warm temperate climates 107
 - 4.13 The impact of climatic change on the landscape 108
 - 4.14 Loess sheets 108
 - 4.15 Dry valleys and mis-fit streams 109
 - Window 6 The loess of China* 112
 - 4.16 Tors 114
 - 4.17 Natural hazards in the UK 115
- 5 Deserts 124
- 5.1 Introduction 124
 - 5.2 What causes aridity? 126
 - 5.3 Desert rainfall 127
 - 5.4 Desert temperatures 129
 - 5.5 Past climates in deserts 129
 - Window 7 The Dust Bowl of the 1930s in the USA* 130
 - 5.6 Desert vegetation and animals 132
 - 5.7 Soils and surface materials 133
 - 5.8 Insolation and salt weathering 136
 - 5.9 Wind action in deserts 139
 - 5.10 Sand deposition – dunes 141
 - 5.11 The work of rivers 146
 - Window 8 The Namib Desert* 148
 - 5.12 Desert slopes 151
 - 5.13 Groundwater 154
 - 5.14 Dams and reservoirs 154
 - Window 9 The pace and price of irrigation* 155
 - 5.15 Land degradation 156
 - Window 10 Desertification* 158
 - 5.16 Problems of the desert realm 160
- 6 The Tropics 161
- 6.1 The general atmospheric circulation 161
 - 6.2 Trade winds 161
 - 6.3 The wet tropics 162
 - 6.4 Tropical seasonal climates 163
 - 6.5 Monsoons 163
 - 6.6 Tropical disturbances 164
 - 6.7 Tropical rainforest 167
 - Window 11 Hurricane Gilbert, Jamaica, 1988* 170
 - 6.8 Secondary forest 174
 - 6.9 Tropical seasonal forest and savanna 175
 - 6.10 Mangrove swamps 177
 - 6.11 Coral reefs 179
 - 6.12 Weathering of rocks 181
 - Window 12 The Great Barrier Reef* 182
 - 6.13 Slope movements 184
 - 6.14 Some problems of the humid tropics 184
- PART III Mountain and Maritime Environments**
- 7 Mountains 189
- 7.1 Introduction 189
 - 7.2 Mountain climates 189
 - 7.3 Snow and the snow-line 195
 - 7.4 Mountain vegetation 196
 - 7.5 The timber-line 198
 - Window 13 Avalanches in the European Alps* 201
 - 7.6 Alpine tundra 201
 - 7.7 Mountain hazards 202
- 8 Coasts 203
- 8.1 Coastlines 203
 - 8.2 Waves 203
 - 8.3 Barrier beaches and related forms 208
 - 8.4 Tides 210
 - 8.5 Storm surges 212
 - 8.6 Estuaries 213
 - 8.7 Coastal dunes 214
 - 8.8 Salt marshes 215

- 8.9 Coast erosion 217
- 8.10 The human impact on the coastline 218
- Window 14 The greenhouse effect and sea-level rise 222*

PART IV Landscapes and Ecosystems

- 9 Plants and Animals 225
 - 9.1 Ecology and ecosystems 225
 - Window 15 The carbon cycle 228*
 - 9.2 Plants and their habitats 230
 - 9.3 Life in the oceans 233
 - 9.4 Community 234
 - 9.5 Succession 235
 - 9.6 Dispersal and migration of plants 237
 - 9.7 Dispersal and migration of animals 237
 - 9.8 The importance of area 238
 - 9.9 Human impact on plants and animals 239
 - 9.10 Domestication 239
 - 9.11 Introductions 240
 - 9.12 Pollution 242
 - Window 16 Acid precipitation 244*
 - 9.13 Extinction 246
 - Window 17 Forest decline in Europe 247*
 - 9.14 Habitat change 249
 - Window 18 Wetlands – a habitat under threat 250*
 - 9.15 Conservation 250
- 10 Tectonic Features 252
 - 10.1 Introduction 252
 - 10.2 Volcanoes 252
 - 10.3 Intrusive igneous rocks 261
 - 10.4 Earthquakes 263
 - 10.5 Man-made seismic activity 266
 - 10.6 Faults 267
 - 10.7 Folding 268
- 11 Slopes 274
 - 11.1 Mass movements 274
 - 11.2 Slope instability 278
 - 11.3 Other processes operating on slopes 281
- 11.4 Slope forms 281
- 11.5 Slope development through time 285
- 12 Soils and Weathering 289
 - 12.1 Factors of soil formation 289
 - 12.2 Soil profiles 293
 - 12.3 Types of weathering 294
 - 12.4 Mechanical weathering 295
 - 12.5 Chemical weathering 295
 - 12.6 Accelerated soil erosion 302
 - Window 19 The karst of south China 304*
- 13 The Hydrological Cycle 309
 - 13.1 Introduction 309
 - 13.2 Precipitation 310
 - 13.3 Interception 314
 - 13.4 Evapotranspiration 315
 - 13.5 Infiltration 316
 - 13.6 Surface runoff 317
 - 13.7 Groundwater 320
 - 13.8 Streamflow and the hydrograph 322
 - 13.9 Annual river regimes 328
 - 13.10 Lakes 328
 - Window 20 The Great Lakes of North America 330*
- 14 Rivers 333
 - 14.1 Introduction 333
 - 14.2 Morphometry of drainage basins 333
 - 14.3 Drainage basin patterns 334
 - 14.4 Concave long profiles 334
 - 14.5 Channel cross-section and hydraulic geometry 337
 - 14.6 Channel patterns 338
 - 14.7 Floodplains 341
 - 14.8 Terraces 342
 - 14.9 Deltas 343
 - 14.10 Stream transport 344
 - Window 21 The Mississippi Delta 346*
 - 14.11 Rates of fluvial denudation 350
 - 14.12 Floods 352
- 15 Cities 355
 - 15.1 The climates of cities 355

- 15.2 Air pollution and its problems 357
- 15.3 Urbanisation and river flow 359
- 15.4 Thermal pollution of river
water 359
- Window 22 Urbanisation and
hydrology 360*
- 15.5 Soil erosion and sediment yield
associated with construction and
urbanisation 362
- 15.6 Animals in cities 363

PART V Conclusion

- 16 Nature, Man and the Environment 367
 - 16.1 Introduction 367
 - 16.2 Environmental complexity 367

- 16.3 Environmental interactions 367
- 16.4 The importance of scale 368
- 16.5 The influence of environment on
man 368
- 16.6 Man's role and the human
impact 368
- 16.7 The ever-changing
environment 369
- 16.8 Man or nature? 369
- 16.9 Equifinality 370
- 16.10 The relevance and application of
physical geography 370

Appendix: Guide to Further Reading 373
