# CONTENTS

Preface . . . . .	v
1. Introduction . . . . .	1
2. Origin of the Earth . . . . .	7
2.1 Means of studying the universe . . . . .	8
2.2 Some features of the universe . . . . .	10
2.3 The solar system . . . . .	12
2.4 Condensation hypotheses . . . . .	19
2.5 Fragmentation theories . . . . .	22
3. Origin of the Moon . . . . .	26
4. Geochronology . . . . .	29
4.1 Age of the moon . . . . .	29
4.2 The red shift . . . . .	30
4.3 Radioactive disintegration . . . . .	30
4.4 Age of oldest rocks . . . . .	37
4.5 Age of meteorites . . . . .	38
4.6 Age of the crust . . . . .	40
4.7 Other radioactive age determinations . . . . .	40
4.8 Rate of erosion and sedimentation . . . . .	41
4.9 Age of the oceans . . . . .	44
4.10 Figures from astronomic evidence . . . . .	45
4.11 Cooling of the earth . . . . .	46
5. Temperature of the Earth. . . . .	47
5.1 Sources of error in measurements . . . . .	48
5.2 Surface temperature . . . . .	48
5.3 Factors affecting temperature gradient . . . . .	50
5.4 Sources of the earth's heat . . . . .	56
5.5 Distribution of radioactive elements . . . . .	58
5.6 Variation of temperature with depth . . . . .	62
6. Seismic Waves . . . . .	65
6.1 Definitions . . . . .	65
6.2 Microseisms . . . . .	66
6.3 The Assam earthquake of 1897 . . . . .	67
6.4 The seismograph . . . . .	70
6.5 Strain seismometers . . . . .	77
6.6 Seismograms . . . . .	78
6.7 Types of earthquake waves . . . . .	79
7. Observational Seismology . . . . .	83
7.1 Earth motion . . . . .	83
7.2 Foreshocks and aftershocks . . . . .	86

7.3	Epicenter and focus . . . . .	86
7.4	Intensity . . . . .	88
7.5	Seiches . . . . .	96
7.6	Tunamis . . . . .	98
7.7	Study of earthquake effects . . . . .	100
<b>8.</b>	<b>Cause of Earthquakes.</b> . . . .	<b>112</b>
8.1	The San Andreas fault . . . . .	112
8.2	The Tejon earthquake . . . . .	114
8.3	The 1906 San Francisco earthquake . . . . .	115
8.4	The 1940 Imperial Valley earthquake . . . . .	116
8.5	Elastic rebound theory . . . . .	117
8.6	Mechanics of the break . . . . .	119
8.7	Classification of earthquakes . . . . .	120
8.8	Pseudoseisms . . . . .	123
8.9	Periodicity of earthquakes . . . . .	123
<b>9.</b>	<b>Instrumental Seismology</b> . . . . .	<b>124</b>
9.1	What is measured . . . . .	124
9.2	Magnitude . . . . .	125
9.3	Frequency of earthquakes . . . . .	129
9.4	Benioff's rule . . . . .	131
9.5	Significance of first breaks . . . . .	138
9.6	Attenuation with distance . . . . .	141
9.7	Prediction . . . . .	143
<b>10.</b>	<b>Transmission of Seismic Waves</b> . . . . .	<b>147</b>
10.1	Derivation of basic equations . . . . .	147
10.2	Strains resulting from dilatation . . . . .	151
10.3	Shearing strains . . . . .	153
10.4	Equations of motion . . . . .	156
10.5	Dilatational waves . . . . .	157
10.6	Shear waves . . . . .	157
10.7	Reflection and refraction . . . . .	158
10.8	Division of energy . . . . .	164
10.9	Surface waves . . . . .	167
<b>11.</b>	<b>Data Derived from Seismology.</b> . . . .	<b>171</b>
11.1	Travel-time curves . . . . .	171
11.2	Paths in the earth . . . . .	172
11.3	Core of the earth . . . . .	173
11.4	Paths for deep-focus sources . . . . .	175
11.5	Surface layers . . . . .	176
11.6	"SOFAR" channel . . . . .	181
11.7	Evidence from surface waves . . . . .	183
11.8	Andesite line . . . . .	184
11.9	Evidence from reflection amplitudes . . . . .	184
11.10	Deeper layering . . . . .	186
11.11	Depth of focus . . . . .	187
11.12	Location of epicenters . . . . .	188
11.13	Tsunami warning system . . . . .	190

<b>12. Mass, Moment, Shape, and Size of the Earth . . . . .</b>	<b>191</b>
12.1 Universal law of gravitation . . . . .	191
12.2 Cavendish's experiment . . . . .	194
12.3 Acceleration of gravity . . . . .	195
12.4 Radius of the earth . . . . .	197
12.5 Variation of gravity with latitude and longitude . . . . .	199
12.6 Mean density of the earth . . . . .	200
12.7 Moment of inertia . . . . .	200
12.8 Motion of the poles . . . . .	201
<b>13. Density and Elastic Constants . . . . .</b>	<b>203</b>
13.1 Uniformity of layering. . . . .	203
13.2 Poisson's ratio . . . . .	204
13.3 Variation in density with depth . . . . .	204
13.4 The other elastic constants . . . . .	207
13.5 Pressure and gravity . . . . .	208
<b>14. Measurement of Gravity . . . . .</b>	<b>209</b>
14.1 The gravity pendulum. . . . .	209
14.2 The gravimeter . . . . .	211
14.3 Gravity corrections: free air . . . . .	214
14.4 Combined topographic correction . . . . .	215
14.5 Bouguer correction. . . . .	219
14.6 Simple topographic correction . . . . .	220
14.7 Simple elevation and Bouguer corrections for local surveys . . . . .	221
14.8 Earth tides . . . . .	224
<b>15. Isostasy . . . . .</b>	<b>227</b>
15.1 Pratt's theory . . . . .	227
15.2 Airy's theory . . . . .	229
15.3 Heiskanen's method . . . . .	233
15.4 Indirect correction . . . . .	234
15.5 Glacial disturbances . . . . .	235
15.6 Effects of erosion and deposition . . . . .	235
15.7 Mechanism of compensation . . . . .	236
15.8 The law of isostasy. . . . .	237
<b>16. Tectonic Forces . . . . .</b>	<b>238</b>
16.1 Elastic yielding . . . . .	239
16.2 Elastic afterworking . . . . .	239
16.3 Breaking strength . . . . .	241
16.4 Plastic flow . . . . .	244
16.5 Deformation of rocks . . . . .	246
16.6 Sources of tectonic forces . . . . .	249
16.7 Observed earth movements . . . . .	255
<b>17. Origin of the Continents. . . . .</b>	<b>256</b>
17.1 Distinctive features . . . . .	256
17.2 Origin by local differentiation . . . . .	267
17.3 Sedimentary segregation . . . . .	270
17.4 Suboceanic assimilation theory . . . . .	271

17.5	Concentration by gravity . . . . .	271
17.6	Concentration by subcrustal convection currents . . . . .	274
17.7	The tidal resonance theory . . . . .	276
17.8	Origin by addition of mass to the earth . . . . .	276
<b>18.</b>	<b>Continental Drift.</b> . . . . .	<b>279</b>
18.1	Proof of drift . . . . .	279
18.2	Taylor's theory . . . . .	280
18.3	Continental drift as an explanation of the origin of mountains . . . . .	282
18.4	The Wegenerian hypothesis . . . . .	283
18.5	Objections to Wegener's ideas . . . . .	287
<b>19.</b>	<b>Tectonic Patterns.</b> . . . . .	<b>290</b>
19.1	Classification of areas . . . . .	290
19.2	Seismicity of the earth. . . . .	291
19.3	Stable areas . . . . .	297
19.4	Mountain belts . . . . .	299
19.5	Volcanoes . . . . .	301
19.6	Troughs . . . . .	303
19.7	Gravity anomalies . . . . .	303
<b>20.</b>	<b>Typical Tectonic Profiles.</b> . . . . .	<b>306</b>
20.1	Japan . . . . .	306
20.2	Tonga-Kermadec region . . . . .	309
20.3	South America . . . . .	309
<b>21.</b>	<b>Cause of Mountain Building.</b> . . . . .	<b>311</b>
21.1	Geological features of mountain ranges . . . . .	311
21.2	Laboratory experiments . . . . .	317
21.3	Contraction theory . . . . .	319
21.4	Gravitative sliding . . . . .	324
21.5	Subcrustal convection currents . . . . .	326
21.6	Thermal cycles . . . . .	330
<b>22.</b>	<b>Geomagnetism</b> . . . . .	<b>334</b>
22.1	Description of the magnetic field. . . . .	335
22.2	Magnetic properties of rocks . . . . .	340
22.3	Variability of the field . . . . .	343
<b>23.</b>	<b>Terrestrial Electricity.</b> . . . . .	<b>349</b>
23.1	Electrical conduction in rock . . . . .	349
23.2	Conduction in air . . . . .	349
23.3	Cause of the external magnetic field . . . . .	352
23.4	Earth currents . . . . .	354
23.5	Cause of the main magnetic field. . . . .	357
23.6	Magnetic storms . . . . .	359
23.7	Solar flares . . . . .	360
<b>24.</b>	<b>Geomagnetic and Geoelectric Instruments.</b> . . . . .	<b>361</b>
24.1	Magnetic compasses . . . . .	361
24.2	Dip needles . . . . .	362

CONTENTS

xi

24.3	Deflection magnetometers . . . . .	363
24.4	Earth inductors . . . . .	366
24.5	Induction variometer . . . . .	367
24.6	Flux-gate magnetometer . . . . .	368
24.7	Nuclear resonance magnetometer . . . . .	369
24.8	Measurement of variations of the magnetic field . . . . .	369
24.9	Susceptibility and permanent magnetization . . . . .	369
24.10	Earth potentials . . . . .	370
24.11	Resistivity measurements . . . . .	371
24.12	Ionosphere height measurements . . . . .	373
	<b>References . . . . .</b>	<b>375</b>
	<b>Index . . . . .</b>	<b>389</b>
