Contents

Preface

PART I: OBSERVING JUPITER

1 Observations from Earth

- 1.1 A view of Jupiter 3
- 1.2 History of visual observation 5
- 1.3 Methods of visual observation 10
- 1.4 Professional and photographic observations 16

2 Observations from spacecraft

- 2.1 The Pioneer project 21
- 2.2 The Voyager project 27
- 2.3 The Galileo project 35

PART II: THE VISIBLE STRUCTURE OF THE ATMOSPHERE

3 Horizontal structure: belts, currents, spots and storms

- 3.1 Belts, zones, and dynamical domains 43
- 3.2 Currents and jetstreams 43
- 3.3 Spots and streaks 45
- 3.4 Three types of disturbance 50

4 Vertical structure: colours and clouds

- 4.1 The colours of the clouds 59
- 4.2 The heights of the clouds: viewing at an angle 59
- 4.3 Thermal radiation 62
- 4.4 The upper atmosphere: studies from infrared emission 66
- 4.5 The upper atmosphere: studies from occultations 68
- 4.6 How high do the winds extend? 74
- 4.7 Summary: the vertical structure of the atmosphere 77

PART III: THE OBSERVATIONAL RECORD OF THE ATMOSPHERE

5 The Polar Regions

- 5.1 Visual observations 81
- 5.2 Professional and spacecraft observations 81

6 North North Temperate Regions (57°N to 35°N)

- 6.1 Overview 85
- 6.2 Visual and photographic observations 91
- 6.3 Spacecraft observations 95
- 6.4 The NNTBs prograding jetstream 95

7 North Temperate Region (35°N to 23°N)

- 7.1 Overview 101
- 7.2 The NTB(N) and North Temperate Zone 101
- 7.3 Periodic behaviour of the NTB 102
- 7.4 The NTBs prograding jetstream 105

8 North Tropical Region (23°N to 9°N)

- 8.1 Overview 113
- 8.2 North Tropical Zone 114
- 8.3 Variations in the North Tropical Current 116
- 8.4 Spots on the NEB north edge 117
- 8.5 Activity in the NEB 123

9 Equatorial Region (9°N to 9°S)

- 9.1 Overview 133
- 9.2 The NEB south edge 134
- 9.3 Features on the equator 145
- 9.4 Colorations of the Equatorial Zone 147
- 9.5 The SEB north edge 153

10 South Tropical Region (9°S to 27°S)

- 10.1 Overview 159
- 10.2 The South Equatorial Belt 159
- 10.3 Revivals of the South Equatorial Belt 167
- 10.4 Long-running SEB activity and mid-SEB outbreaks 169
- 10.5 The Great Red Spot 184
- 10.6 The South Tropical Zone 188

10.7	South Tropical Disturbances and Dislocations	197		
10.8	South Tropical Bands and shadings	213		
10.9	The STBn prograding jetstream	215		
11	South Temperate Region (27°S to 37°S)	219		
11.1	Overview	219		
11.2	'SSTC invasions' and the 'South Temperate Disturbance'	222		
11.3	The three white ovals	223		
11.4	Fading of sectors of the STB	228		
11.5	The SSTBn prograding jetstream	231		
12	South South Temperate Regions (37°S to 53°S)	235		
12.1	Overview	235		
12.2	Spacecraft observations	239		
12.3	History of the SSTB, 1900–1940	241		
12.4	History of the SSTB, 1940–1990	242		
12.5	The S ⁴ TBn prograding jetstream and the edge of the polar region	244		
PART IV: THE PHYSICS AND CHEMISTRY OF THE ATMOSPHERE				
13	Possible large-scale and long-term patterns	247		
13.1	Dislocations of belts, zones, and jetstreams	247		
13.2	Hemispheric asymmetry	249		
13.3	Global upheavals	249		
13.4	Possible periodicities	252		
14	The dynamics of individual spots	255		
14.1	Early theories of the Great Red Spot	255		
14.2	The GRS and other ovals as anticyclonic vortices	256		
14.3	Jetstream spots as anticyclonic vortices	260		
14.4	The formation and evolution of anticyclonic circulations	261		
14.5	Waves and oscillations	264		
14.6	Cyclonic disturbances and bright plumes	266		
15	Theoretical models of the atmospheric dynamics	269		
15.1	The depth of the atmosphere: the evidence	269		
15.2	Jetstream dynamics: What determines the global pattern?	272		
15.3	Jetstream dynamics: What provides the energy?	275		
15.4	Ten questions for future research	276		
16	The composition of the planet	277		
16.1	The chemical composition of the atmosphere: observations	277		
16.2	The chemical composition of the atmosphere: theory	279		
16.3	The global composition	281		
16.4	Beneath the clouds	282		
			PART V: THE ELECTROMAGNETIC ENVIRONMENT OF JUPITER	
			17 Lights in the jovian night	287
			17.1 Lightning	287
			17.2 Meteors	287
			17.3 Aurora	287
			17.4 Airglow	289
			18 The magnetosphere and radiation belts	293
			18.1 Overview	293
			18.2 Components of the magnetosphere	299
			18.3 The Io cloud and torus	303
			18.4 The Io flux tube and radio bursts	307
			PART VI: THE SATELLITES	
			19 The inner satellites and the ring	313
			20 The galilean satellites	319
			20.1 Discovery and history	319
			20.2 Visual and photographic observations	320
			20.3 The satellite surfaces	329
			20.4 The search for atmospheres	331
			20.5 The satellite interiors	333
			20.6 The satellite orbits	334
			21 Io	341
			21.1 Overview	341
			21.2 The active volcanoes	345
			21.3 The dormant volcanoes	351
			21.4 The physics and chemistry of Io: interior, volcanoes, and atmosphere	353
			21.5 The plains and the mountains	360
			22 Europa	363
			23 Ganymede	371
			24 Callisto	383
			25 The outer satellites	387
			PLATES	between 388 and 389
			APPENDICES	
			A1 Measurements of longitude	389
			A2 Measurements of latitude	396
			A3 Lists of apparitions and published reports	401
			A4 Bibliography (The planet)	405
			A5 Bibliography (Magnetosphere and satellites)	412
			INDEX	417
