Contents

Preface	xi
1. Introduction	1
1.1 Exoplanets from Afar	1
1.2 Two Paths to Observing Exoplanet Atmospheres	2
1.3 Types of Planets	4
2. Intensity and Flux	9
2.1 Introduction	9
2.2 Intensity	9
2.3 Flux and Other Intensity Moments	10
2.4 Surface Flux	11
2.5 Observed Flux	14
2.6 Luminosity and Outgoing Energy	16
2.7 Incident Flux and Incident Energy	17
2.8 Black Body Intensity and Black Body Flux	19
2.9 Lambert Surface	20
2.10 Summary	22
3. Temperature, Albedos, and Flux Ratios	25
3.1 Introduction	25
3.2 Energy Balance	25
3.3 Planetary Temperatures	27
3.4 Planetary Albedos	32
3.5 Planet-Star Flux Ratios	40
3.6 Planetary Phase Curves	45
3.7 Summary	47
4. Composition of a Planetary Atmosphere	51
4.1 Introduction	51
4.2 Composition of Earth's and Jupiter's Atmospheres	51
4.3 Chemical Composition	56
4.4 Basic Cloud Physics	66
4.5 Atmospheric Escape	72
4.6 Atmospheric Evolution	81
4.7 Summary	83

5. Radiative Transfer I: Fundamentals	87
5.1 Introduction	87
5.2 Opacity	87
5.3 Optical Depth	91
5.4 Local Thermodynamic Equilibrium	93
5.5 The Source Function	96
5.6 The Equation of Radiative Transfer	96
5.7 Summary	100
6. Radiative Transfer II: Solutions	103
6.1 Introduction	103
6.2 A Conceptual Description of the Emergent Spectrum	103
6.3 An Introduction to Line Formation	108
6.4 Approximate Solutions to the Plane-Parallel Radiative Transfer Equation	113
6.5 Monte Carlo Radiative Transfer	125
6.6 Summary	127
7. Polarization	133
7.1 Introduction	133
7.2 Description of Polarized Radiation	134
7.3 Polarization Calculations	138
7.4 Polarization from Planets	140
7.5 Summary	143
8. Opacities	145
8.1 Introduction	145
8.2 Energy Levels in Atoms and Molecules	146
8.3 Molecular Absorption Cross Sections	161
8.4 Rayleigh Scattering	166
8.5 Condensate Opacities	167
8.6 Summary	176
9. Vertical Thermal Structure of a Planetary Atmosphere	181
9.1 Introduction	181
9.2 Earth's Vertical Atmospheric Structure	181
9.3 Hydrostatic Equilibrium and the Pressure Scale Height	183
9.4 Surface Temperature for a Simplified Atmosphere	186
9.5 Convection versus Radiation	190
9.6 The Radiative Equilibrium Temperature Profile	192
9.7 The Adiabatic Temperature Profile	200
9.8 The One-Dimensional Temperature-Pressure Profile	202
9.9 Temperature Retrieval	205
9.10 Summary	207
10. Atmospheric Circulation	211
10.1 Introduction	211
10.2 Radiative and Advective Timescales	213
10.3 Large-Scale Flow and Patterns	215
10.4 Atmospheric Dynamics Equations	218

CONTENTS	ix
10.5 Connection to Observations	223
10.6 Summary	225
11. Atmospheric Biosignatures	229
11.1 Introduction	229
11.2 Earth's Biosignatures	229
11.3 The Ideal Biosignature Gas	230
11.4 Prospects	231
11.5 Summary	234
A. Planetary Data	237
Index	241
