Acknowledgments.....	xxiii
Author.....	xxv
List of Tables.....	xxvii
List of Symbols.....	xxxii

Chapter 1	Introduction to Planets and Planetary Systems.....	1
1.1	Planetary Systems.....	1
1.1.1	Solar System Planets.....	3
1.2	Orbital Motion.....	4
1.2.1	Basics of Orbital Mechanics.....	4
1.2.1.1	Newton's Law of Universal Gravitation.....	5
1.2.1.2	Motion under a Central Conservative Force.....	6
1.2.1.3	Kepler's Laws of Planetary Motion.....	10
1.2.2	The Motion of Two Bodies under Their Mutual Gravitational Attraction.....	12
1.2.3	Three-Body Problem.....	14
1.2.4	Orbital Perturbations and Resonances.....	15
1.3	Gravitational Field and the Shape of Planets and Major Satellites.....	16
1.3.1	Gravitational Field of a Planet.....	17
1.3.2	Gravitational Tidal Force and Torque.....	24
1.3.3	Roche's Limit.....	26
1.3.4	Planetary Rotation System and Coordinates.....	26
1.4	Primary Energy Sources on Planets.....	29
1.4.1	Rotational Mechanical Energy.....	29
1.4.2	Internal Energy.....	29
1.4.2.1	Radioactive Decay.....	29
1.4.2.2	Gravitational Energy.....	30
1.4.2.3	Tidal Heating.....	32
1.4.3	External Energy.....	33
1.4.3.1	Global Insolation.....	33
1.4.3.2	Insolation in a Planet or Satellite.....	34
1.4.3.3	Albedo.....	37
1.4.4	Equilibrium and Effective Temperatures.....	38
1.5	Internal Structure of Planets and Satellites.....	40
1.5.1	Equation of State.....	40
1.5.2	Density Profiles.....	41

1.5.3	Mass–Radius Relationship	45
1.5.4	Energy Transport in the Planetary Body.....	47
1.5.4.1	Conduction.....	47
1.5.4.2	Radiation.....	49
1.5.4.3	Convection	50
1.5.5	Planetary Structure: Internal Differentiation of Solid Bodies	52
1.6	Magnetic Field	54
1.6.1	Maxwell Equations.....	55
1.6.2	Dynamo Regime.....	56
1.6.3	Dipole Field	58
1.6.4	Magnetic Fields in Solar System Bodies.....	59
1.7	Planetodiversity	60
	Problems.....	64
Chapter 2	Origin and Evolution of Planetary Atmospheres	71
2.1	Origin of the Solar System	71
2.2	Thermal Evolution of the Planets	76
2.3	Origin of Planetary Atmospheres.....	78
2.3.1	Elemental Abundances and Isotopic Ratios	79
2.3.2	Outgassing Processes	81
2.3.3	Capture Processes	82
2.3.4	Overview of the Origin of Primordial Atmospheres for Each Body.....	84
2.4	Atmospheric Evolution Processes	86
2.4.1	Erosion and Escape Processes.....	86
2.4.1.1	Thermal or Jeans Escape	88
2.4.1.2	Nonthermal or Photochemical Escape	89
2.4.1.3	Hydrodynamical or “Blowoff” Escape.....	90
2.4.1.4	Geometrical “Blowoff” Escape	91
2.4.2	Impacts and Collisions	92
2.4.3	Surface Processes.....	92
2.4.3.1	Condensation	93
2.4.3.2	Adsorption	93
2.4.3.3	Dissolution	93
2.4.3.4	Chemical Weathering	93
2.4.3.5	Atmospheric Feedbacks.....	93
2.4.3.6	Biological Processes	94
2.4.4	Solar (Stellar) Luminosity Variability.....	94
2.4.5	Orbital Cycles.....	95
2.5	Variability of the Earth’s Atmosphere.....	97
2.5.1	Loss of CO ₂	100
2.5.2	The Rise of Oxygen.....	101

2.5.3	Snowball Earth.....	103
2.5.4	Catastrophic Impacts.....	104
2.5.5	Ice Ages (Glaciations).....	105
2.5.6	Warm Periods.....	106
2.5.7	Last Millennium Climate and Modern Times: “Climate Change”.....	106
2.5.7.1	Global Warming.....	107
2.5.7.2	Pollution.....	107
2.5.7.3	Acid Rain.....	107
2.5.7.4	Ozone Hole.....	107
2.6	Observed Atmospheric Changes in Other Planets.....	108
2.6.1	Venus.....	108
2.6.2	Mars.....	109
2.6.3	Solar System Giants and Extrasolar Planets.....	110
2.6.4	Titan.....	111
	Problems.....	111

Chapter 3	Spectroscopy and Composition.....	115
3.1	Atmospheric Composition: Fundamentals.....	115
3.2	Planetary Spectrum: The Continuum.....	116
3.2.1	Reflected Spectrum.....	118
3.2.2	Thermal Spectrum.....	121
3.3	Atomic Spectrum.....	126
3.3.1	Atomic Structure: Basics.....	126
3.3.2	Line Profiles.....	130
3.3.2.1	Collision or Pressure Broadening.....	131
3.3.2.2	Doppler Broadening.....	132
3.3.2.3	Voigt Broadening.....	133
3.3.2.4	Equivalent Width, Transmittance, and the Curve of Growth.....	133
3.4	Molecular Spectrum.....	136
3.4.1	Vibrational Energy Levels.....	137
3.4.2	Rotational Energy Levels.....	138
3.4.3	Vibration–Rotation Bands.....	140
3.4.4	Special Cases.....	141
3.4.4.1	Overtone Bands.....	141
3.4.4.2	Inversion Bands.....	141
3.4.4.3	Collision-Induced Absorptions and Quadrupolar Electric Transitions.....	144
3.4.5	Band Transmittance, Absorptance, and Equivalent Width.....	147
3.4.5.1	Band Models.....	149
3.4.5.2	The Correlated- <i>k</i> Approximation.....	152
3.5	Atmospheric Composition Definitions.....	153
	Problems.....	160

Chapter 4	Vertical Temperature Structure	165
4.1	Vertical Structure of the Atmospheres	165
4.1.1	Hydrostatic Equilibrium: Pressure and Density Scale Heights	166
4.1.2	Observed Temperature Structure	167
4.1.2.1	Venus	171
4.1.2.2	Earth	171
4.1.2.3	Mars	172
4.1.2.4	Titan	173
4.1.2.5	Jupiter, Saturn, Uranus, and Neptune	173
4.2	Radiative Transfer	173
4.2.1	Radiative Transport: Definitions	174
4.2.2	Equation of Radiative Transfer	175
4.2.2.1	Source Function Independent of the Optical Depth.....	177
4.2.2.2	Purely Absorbing Medium	177
4.2.2.3	Local Thermodynamic Equilibrium.....	177
4.2.2.4	Absorption and Emission Lines under LTE	177
4.3	Radiative Equilibrium in Atmospheres	178
4.3.1	Vertical Temperature Profile in Radiative Equilibrium	179
4.3.2	Greenhouse Effect.....	180
4.3.3	Heating Rates	182
4.3.4	Radiative Time Constant.....	185
4.3.5	Radiative Temperature: Temporal Variability.....	188
4.4	Thermal Tides: Temperature Oscillations.....	190
4.5	Adiabatic Lapse Rate.....	196
4.5.1	Thermodynamics: Adiabatic Lapse Rate	196
4.5.2	Potential Temperature	199
4.5.3	Potential Temperature and the Brunt-Väisälä Frequency	202
	Problems.....	207
	Appendix 4.A	212
Chapter 5	Clouds in Planets.....	229
5.1	Chemistry and Surface Processes	229
5.1.1	Chemical Equilibrium.....	230
5.1.1.1	Basics of Chemical Equilibrium.....	230
5.1.1.2	More Detailed Thermochemical Equilibrium.....	230
5.1.2	Surface-Troposphere Cycles of Condensable Gases and Aerosols	232
5.1.2.1	Venus	232
5.1.2.2	Earth	232

	5.1.2.3	Mars	234
	5.1.2.4	Titan	236
5.2		Clouds Properties	236
	5.2.1	Moisture Variables and Definitions.....	237
	5.2.2	Latent Heat and the Clausius–Clapeyron Equation...	240
	5.2.3	Condensation Level and Cloud Formation.....	241
	5.2.4	Cloud Density and Vertical Extent.....	243
	5.2.5	Wet Adiabatic Lapse Rate	248
	5.2.6	Equivalent Potential Temperature and Conditional Instability.....	249
	5.2.6.1	Conditional Instability	249
5.3		Microphysics.....	250
	5.3.1	Growth of Cloud Particles: Nucleation	251
	5.3.2	Diffusion: Condensation–Evaporation– Sublimation	253
	5.3.3	Collision and Coalescence	254
	5.3.4	Sedimentation.....	255
	5.3.5	Size and Shape Distribution	256
5.4		Radiative Transfer in Clouds	258
	5.4.1	Definitions	258
	5.4.2	Gas Absorption and Scattering	260
	5.4.2.1	Gas Absorption: A Useful Simple Approach	260
	5.4.2.2	Rayleigh Scattering.....	261
	5.4.3	Particle Absorption and Scattering (Mie Scattering)	263
	5.4.4	The Radiative Transfer Equation Including Particulates	268
	5.4.4.1	Purely Absorbing Atmosphere	270
	5.4.4.2	Infrared Intensity: Thermal Radiation and the Temperature Profile	271
	5.4.4.3	Single-Scattering Approximation	272
	5.4.4.4	Isotropic Scattering.....	273
	5.4.4.5	Thick Clouds.....	273
	5.4.4.6	Reflectivity Laws	273
	5.4.5	Cloud Forcing and Aerosol Heating Rates.....	275
5.5		Observed Cloud Properties: Overview	275
		Problems.....	286
Chapter 6		Upper and Tenuous Atmospheres.....	293
	6.1	Upper Atmospheres: Introduction	294
	6.2	Photochemistry	296
	6.2.1	Fundamentals	296
	6.2.2	Applications to Terrestrial and Giant Planets, Titan, Triton, and Pluto	299

	6.2.2.1	Earth	299
	6.2.2.2	Venus	303
	6.2.2.3	Mars	304
	6.2.2.4	Titan	304
	6.2.2.5	Giant Planets.....	304
	6.2.2.6	Triton and Pluto	307
6.3		Photoionization: Ionospheres.....	307
	6.3.1	Ionization by Photons.....	308
	6.3.2	Planetary Ionospheres	310
	6.3.2.1	Earth	310
	6.3.2.2	Venus and Mars	311
	6.3.2.3	Giant Planets.....	312
	6.3.2.4	Titan	313
	6.3.3	Electrical Properties.....	314
6.4		Upper Atmospheres Heating Balance	315
6.5		Diffusion Processes	318
	6.5.1	Molecular Diffusion	318
	6.5.2	Eddy Diffusion	321
	6.5.3	Diffusion Processes in Planetary Atmospheres	322
6.6		Airglow and Aurora.....	326
	6.6.1	Airglow.....	326
	6.6.2	Aurora.....	329
6.7		Gas Production Mechanisms in Tenuous Atmospheres	333
	6.7.1	Sputtering	335
	6.7.2	Surface Ice Sublimation	336
	6.7.3	Outgassing from the Interior: Volcanic and Geyser Activity.....	338
6.8		Overview of the Tenuous Atmospheres.....	339
	6.8.1	Mercury and Moon.....	339
	6.8.2	Io.....	340
	6.8.3	Europa, Ganymede, Callisto	341
	6.8.4	Enceladus.....	342
	6.8.5	Triton	342
	6.8.6	Pluto.....	345
		Problems.....	345
Chapter 7		Global Atmospheric Motions	353
	7.1	Equations of Atmospheric Motions.....	353
	7.1.1	Total and Partial Derivates.....	353
	7.1.2	Equations.....	354
	7.1.2.1	Continuity	354
	7.1.2.2	Equation of State.....	355
	7.1.2.3	Navier–Stokes Equation	355
	7.1.2.4	Thermodynamic Energy Equation	358

7.2	Momentum Equation: Balances	360
7.2.1	Tangent-Plane Geometry.....	362
7.2.1.1	f -Plane Approximation.....	362
7.2.1.2	β -Plane Approximation.....	362
7.2.2	Geostrophic Balance	363
7.2.3	Cyclostrophic Balance.....	364
7.2.4	Gradient Wind Balance.....	364
7.2.5	Hydrostatic Equilibrium and Geopotential	365
7.2.6	Boussinesq and Anelastic Approximations.....	366
7.2.7	Thermal-Winds.....	367
7.2.7.1	Rapidly Rotating Planet.....	367
7.2.7.2	Slowly Rotating Planet.....	368
7.2.7.3	Intermediate Case of a Moderately Rotating Planet	369
7.2.8	Meridional Circulation—Hadley Circulation	369
7.2.9	Condensation Flows	371
7.3	Vorticity.....	372
7.3.1	Vorticity and Circulation.....	372
7.3.2	The Vorticity Equation.....	374
7.3.3	Potential Vorticity	376
7.3.4	Quasi-Geostrophic Potential Vorticity	377
7.4	The Planetary Boundary Layer and Turbulent Motions.....	378
7.4.1	Motions Close to the Surface	380
7.4.1.1	The Ekman Layer	380
7.4.1.2	Ekman Pumping	382
7.4.1.3	The Surface Boundary Layer and Mixing Length.....	383
7.4.2	Generalized Turbulence	384
7.4.2.1	Kolmogorov Turbulence	386
7.4.2.2	Two-Dimensional Planetary Turbulence... 387	
7.5	Observed Large-Scale Motions in the Planets	389
7.5.1	Rapidly Rotating Bodies with Surface: Earth and Mars.....	390
7.5.2	Slowly Rotating Bodies with Surface: Venus and Titan.....	393
7.5.3	Tenuous Atmospheres: Triton, Pluto, and Io	397
7.5.4	Giant Planets	397
7.6	The General Circulation of Planetary Atmospheres	401
7.6.1	Types of Dynamical Models	403
7.6.1.1	The Primitive Equation (PE) Model.....	404
7.6.1.2	Shallow Water (SW)	405
7.6.1.3	One and a Half Model (“1½”).....	405
7.6.1.4	Quasi-Geostrophic (QG).....	405
7.6.2	Numerical Solutions.....	406
7.6.2.1	Finite Differences	406
7.6.2.2	Spectral Methods	407

7.6.3	Angular Momentum and Energy Budgets	408
7.6.3.1	Angular Momentum Balance	408
7.6.3.2	Energy Budget and Transformations	409
7.6.4	The Circulation of the Atmospheres of the Giant and Icy Fluid Planets	412
7.6.4.1	Deep Circulation Models	413
7.6.4.2	Shallow Layer Models	416
7.6.4.3	The Uranus and Neptune Case	417
7.6.4.4	Lower Stratosphere Circulation	418
7.6.4.5	Extrasolar Planets: Circulation in “Hot Jupiters”	419
	Problems	421
Chapter 8	Atmospheric Dynamics-I: Waves	429
8.1	Wave Characteristics	429
8.1.1	Wave Properties	429
8.1.2	The Linear Theory	430
8.2	Acoustic Waves	431
8.3	Gravity Waves	432
8.3.1	Pure Gravity Waves	433
8.3.2	Topographic Stationary Waves	436
8.3.3	Inertio-Gravity Waves	437
8.3.4	Gravity Wave Observations	437
8.4	Rossby Waves	441
8.4.1	Barotropic Rossby Wave	441
8.4.2	Three-Dimensional Rossby Wave	444
8.4.3	Observed Nonequatorial Rossby Waves in Planets	447
8.5	Planetary-Scale Equatorial Waves	450
8.5.1	Horizontal Structure	452
8.5.1.1	Kelvin Wave ($j=-1$)	453
8.5.1.2	Rossby-Gravity or Yanai Wave ($j=0$)	453
8.5.1.3	Inertia-Gravity Waves and Equatorial Rossby ($j \geq 1$)	454
8.5.2	Vertical Structure	454
8.5.3	Representative Planetary-Scale Equatorial Waves	455
8.6	Thermal Tides: Dynamics	458
8.7	QBO-QQO and SAO Oscillations	461
	Problems	464
Chapter 9	Atmospheric Dynamics-II: Instability	471
9.1	Scales of Motion and Dimensionless Numbers	471
9.2	Vertical Instability: Convective Motions	473

9.2.1	Dry Convection	473
9.2.2	Moist Convection	475
9.2.3	Convective Phenomena in Planetary Atmospheres	477
9.2.3.1	Venus	477
9.2.3.2	Earth	477
9.2.3.3	Mars	479
9.2.3.4	Titan	479
9.2.3.5	Giant Planets: General	480
9.2.3.6	Jupiter	480
9.2.3.7	Saturn	480
9.2.3.8	Uranus and Neptune	482
9.2.4	Lightning	484
9.3	Hydrodynamic Instability: Vortices	486
9.3.1	Natural Coordinates	486
9.3.2	Trajectories and Streamlines	488
9.3.3	Vorticity and Divergence	488
9.3.4	Mean Vorticity and Divergence	490
9.3.5	Balanced Flow	490
9.3.5.1	Geostrophic Vortices	492
9.3.5.2	Inertial Motion	492
9.3.5.3	Cyclostrophic Vortices	493
9.3.5.4	Gradient Wind Vortices	493
9.4	Types of Hydrodynamic Instabilities	494
9.4.1	Kelvin–Helmholtz Instability	494
9.4.2	Inertial Instability	495
9.4.3	Barotropic Instability	496
9.4.4	Baroclinic Instability	498
9.4.4.1	Fundamentals	498
9.4.4.2	Eady Model	499
9.4.4.3	Baroclinic Instability in Planets	501
9.5	Vortices in the Giant Planets	504
9.5.1	Data from Observations	505
9.5.2	Models	510
9.6	Other Dynamical Phenomena	511
9.6.1	Mesoscale Vortices	512
9.6.1.1	Dust Devils	512
9.6.1.2	Earth's Tornado	513
9.6.1.3	Von Kármán Streets	514
9.6.2	Martian Dust Storms	516
9.6.3	Earth Equatorial–Tropical Phenomena	518
9.6.3.1	The Intertropical Convergence Zone and Equatorial Disturbances	519
9.6.3.2	Tropical Cyclones	522
9.6.4	Belts and Zones and Planetary-Scale Disturbances in Jupiter and Saturn	525

9.6.4.1	The South Equatorial Belt Disturbance in Jupiter	527
9.6.4.2	The North Temperate Belt Disturbance in Jupiter	527
9.6.4.3	The South Tropical Zone Disturbance (STrD) in Jupiter.....	529
9.7	Polar Dynamics	530
9.7.1	Earth Polar Vortex.....	531
9.7.2	Polar Dynamics in the Planets	533
9.7.2.1	Mars.....	533
9.7.2.2	Venus North and South Dipole	533
9.7.2.3	Titan Polar Vortex.....	534
9.7.2.4	Jupiter Poles	535
9.7.2.5	Saturn Polar Vortices.....	535
9.7.2.6	Uranus and Neptune Poles.....	536
9.8	Atmospheric Effects of the Impact of Comet Shoemaker-Levy 9 with Jupiter.....	536
9.8.1	Impact.....	537
9.8.2	“Fireball” and “Blowout”	537
9.8.3	Plume Flight	537
9.8.4	Plume Splash and Aerosol Cloud Formation	538
9.8.5	Cloud and Environment Evolution	539
9.9	The July 19th 2009 Impact.....	541
	Problems.....	543
Appendix: Methods to Study Planetary Atmospheres		553
A.1	Remote Sensing Measurements.....	553
A.1.1	Ground Telescopes and Radiotelescopes	554
A.1.2	The Atmospheric Window	555
A.1.3	Remote Sensing Telescopes and Spacecrafts	555
A.1.3.1	Earth Orbiting Space Telescopes.....	555
A.1.3.2	Planet Fly-by.....	558
A.1.3.3	Planet Orbiting.....	558
A.1.4	Remote Sensing Techniques.....	561
A.1.4.1	Imaging.....	561
A.1.4.2	Spectroscopy.....	564
A.1.4.3	Remote Sounding from the Ground	565
A.1.4.4	Occultation Techniques	566
A.1.4.5	Gravitational Field Measurements.....	567
A.2	In Situ Atmospheric Measurements	567
A.2.1	Descending Probes.....	567
A.2.2	Balloons.....	568
A.2.3	Landers and Rovers	568
A.3	Laboratory Studies and Numerical Modeling	569
A.3.1	Fluid Dynamic Laboratories	569
A.3.2	Chemistry	570

A.3.3 Aerosol Properties..... 570
A.3.4 Computer Simulations: Predictions..... 570
A.4 Future Observing Facilities 571

Bibliography 573

Index..... 577
